Dynamic Scheduling: Scoreboard

Politecnico di Milano

v1

Dynamic Scheduling

- Scheduling separates dependent instructions
  - Static – performed by the compiler
  - Dynamic – performed by the hardware
- Advantages of dynamic scheduling
  - Handles dependences unknown at compile time
  - Simplifies the compiler
  - Optimization is done at run time
  - It allows compiled code to run efficiently on a different pipeline
- Disadvantages
  - Cannot eliminate true data dependences
  - significant increase in hardware complexity and power consumption

Getting higher performance: Hardware-based techniques

Technique	Reduces
Dynamic scheduling	Data hazard stalls
Dynamic branch pred.	Control stalls
Multiple issue	CPI_{ideal}
Speculation	Data and control stalls

Example

```
DIVD F0,F2,F4
ADDD F10,F0,F8
SUBD F12,F8,F14
```

Example

```
DIVD F0,F2,F4
ADDD F10,F0,F8
SUBD F12,F8,F14
```

ADDD stalls for F0 (waiting that DIVD commits)

Example

```
DIVD F0,F2,F4
ADDD F10,F0,F8
SUBD F12,F8,F14
```

ADDD stalls for F0 (waiting that DIVD commits)

SUBD would stall even if not data dependent on anything in the pipeline without **dynamic scheduling**.

Cannot execute the second until the first is at least at the end of the execute stage.
In this case even the third must wait, since they are executed "in order" without dynamic scheduling

When is it Safe to Issue an Instruction?

Suppose a data structure keeps track of all the instructions in all the functional units

The following checks need to be made before the Issue stage can dispatch an instruction

- Is the required function unit available?
- Is the input data available? → RAW?
- Is it safe to write the destination? → WAR? WAW?
- Is there a structural conflict at the WB stage?

A Data Structure for Correct Issues
Keeps track of the status of Functional Units

Name	Busy	Op	Dest	Src1	Src2
Int					
Mem					
Add1					
Add2					
Add3					
Mult1					
Mult2					
Div					

The instruction i at the Issue stage consults this table

FU available? check the busy column	
RAW?	search the dest column for i’s sources
WAR?	search the source columns for i’s destination
WAW?	search the dest column for i’s destination

An entry is added to the table if no hazard is detected;
An entry is removed from the table after Write-Back

Key Idea: dynamic scheduling

- Problem:
    - data dependences that cannot be hidden with bypassing or forwarding cause hardware stalls of the pipeline
- Solution: allow instructions behind a stall to proceed
    - – HW rearranges the instruction execution to reduce stalls
- Enables out-of-order execution and completion (commit)
    - – Out-of order execution introduces possibility of WAR, WAW data hazards.
- First implemented in CDC6600 (1963)

CDC6600 Scoreboard

- Instructions dispatched in-order to functional units provided no structural hazard or WAW
  - Stall on structural hazard, no functional units available
  - Only one pending write to any register

CDC6600 Scoreboard

- Instructions dispatched in-order to functional units provided no structural hazard or WAW
  - Stall on structural hazard, no functional units available
  - Only one pending write to any register
- Instructions wait for input operands (RAW hazards) before execution
  - Can execute out-of-order

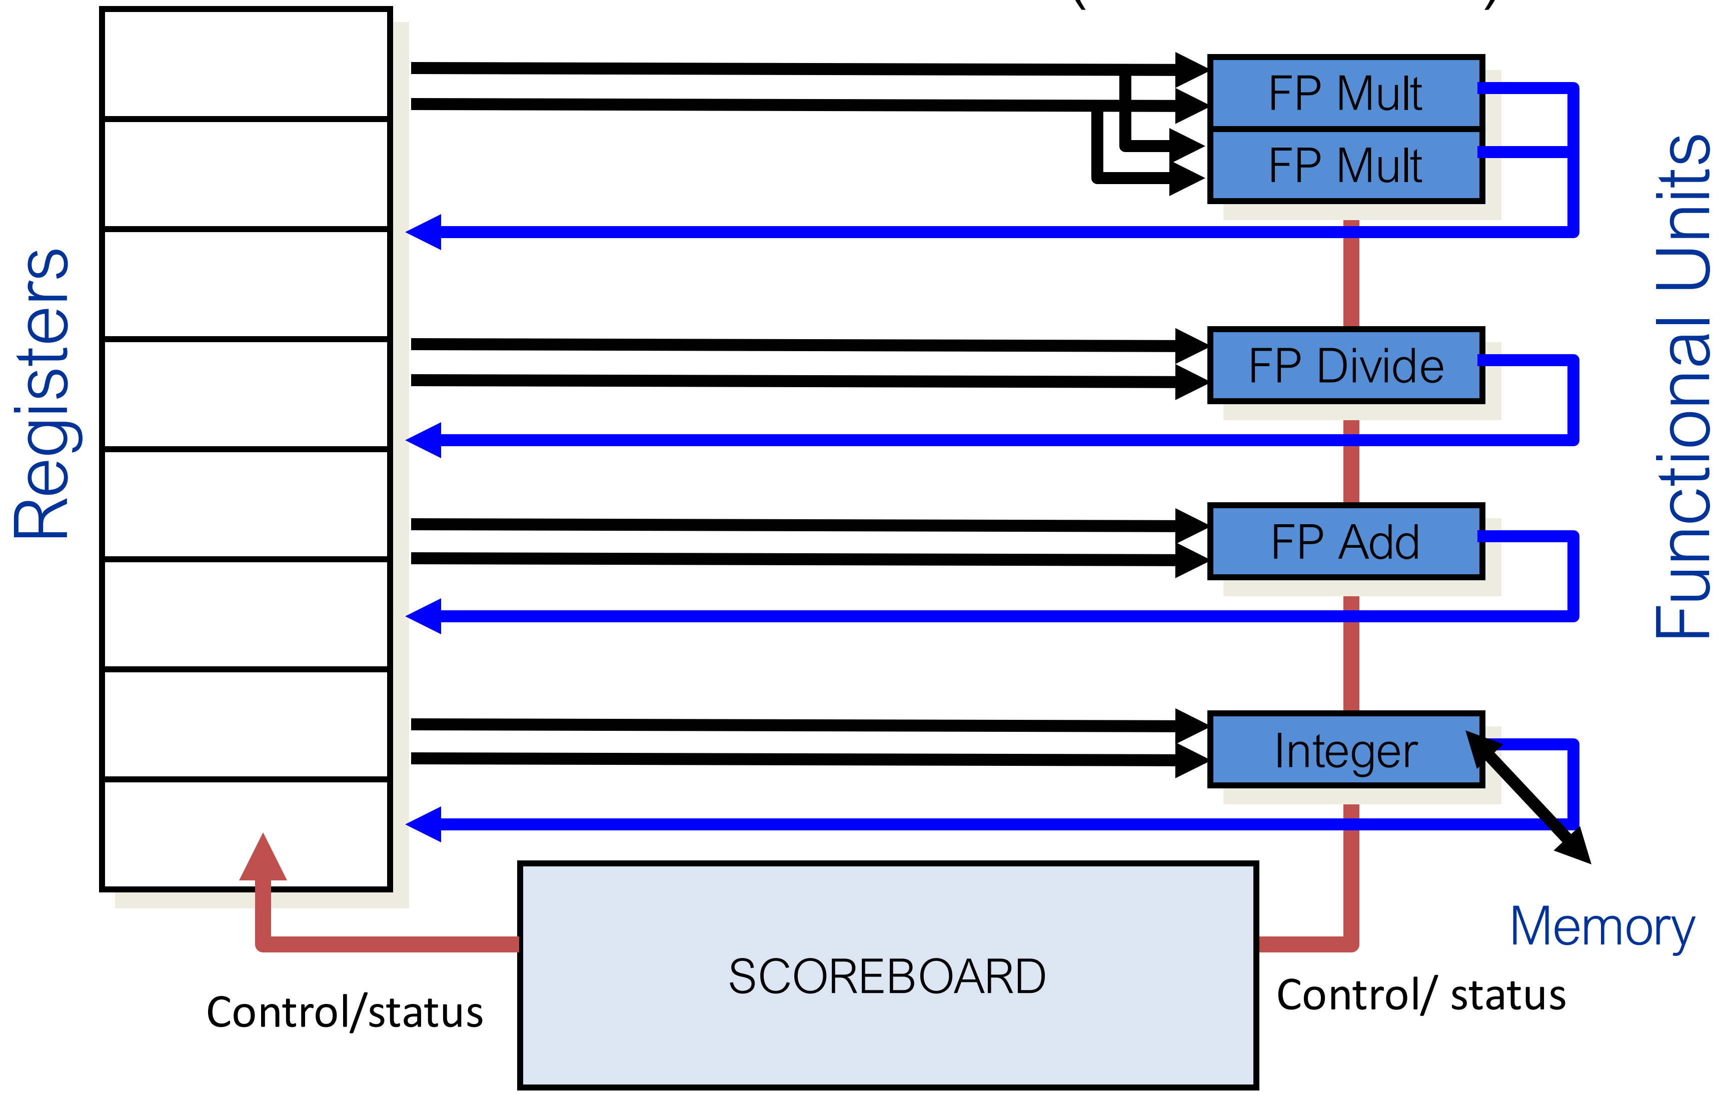
CDC6600 Scoreboard

- Instructions dispatched in-order to functional units provided no structural hazard or WAW
  - Stall on structural hazard, no functional units available
  - Only one pending write to any register

--> By checking WAW at Issue time, the scoreboard can maintain a simple rule: "only one instruction can be responsible for writing to a given register at any time." This is tracked in the Register Result Status table. . Allowing multiple pending writers would require a more complex data structure that tracks the sequence of all pending writes to each register.

- Instructions wait for input operands (RAW hazards) before execution
  - Can execute out-of-order
- Instructions wait for output register to be read by preceding instructions (WAR)
  - Result held in functional unit until register free

Scoreboard Architecture (CDC 6600)



Scoreboard Operation

- Scoreboard centralizes hazard management
  - Every instruction goes through the scoreboard
  - Scoreboard determines when the instruction can read its operands and begin execution
  - Monitors changes in hardware and decides when a stalled instruction can execute
  - Controls when instructions can write results
- New pipeline

ID		EX	WB
Issue	Read Regs	Execution	Write

Scoreboard Scheme

- ID stage divided in two parts:
  - Issue (decode and check structural hazard)
  - Read Operands (wait until no data hazards)
- In-order issue BUT out-of-order read-operands
- Scoreboard allows instructions without dependencies to execute

Four Stages of Scoreboard Control

1. Issue
   Decode instructions & check for structural hazards.

- ✓ **Instructions issued in program order** (for hazard checking)
- ✓ If a functional unit for the instruction is free and no other active instruction has the same destination register (WAW), the scoreboard issues the instruction to the functional unit and updates its internal data structure.
- ✓ If a structural or a **WAW** hazard exists, then the instruction issue stalls, and no further instructions will issue until these hazards are cleared.

Four Stages of Scoreboard Control

2. Read Operands

   Wait until no data hazards, then read operands

   A source operand is available if:

   - no earlier issued active instruction will write it or
   - A functional unit is writing its value in a register

   When the source operands are available, the scoreboard tells the functional unit to proceed to read the operands from the registers and begin execution.
   RAW hazards are resolved dynamically in this step, and instructions may be sent into execution out of order.

   No forwarding of data in this model

Four Stages of Scoreboard Control

3. Execution
   Operate on operands
   The functional unit begins execution upon receiving operands. When the result is ready, it notifies the scoreboard that it has completed execution.

   FUs are characterized by:

   – latency (the effective time used to complete one operation)

   – Initiation interval (the number of cycles that must elapse between issuing two operations to the same functional unit).

Four Stages of Scoreboard Control

4. Write result
   Finish execution

   Once the scoreboard is aware that the functional unit has completed execution, the scoreboard checks for WAR hazards. If none, it writes results. If WAR, then it stalls the instruction.

   Assume we can overlap issue and write

WAR/WAW Example

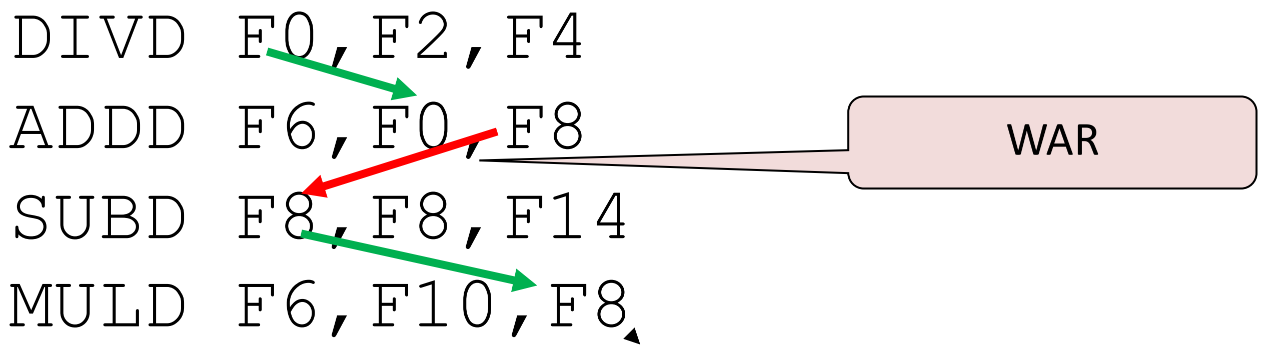
```
DIVD F0,F2,F4
ADDD F6,F0,F8
SUBD F8,F8,F14
MULD F6,F10,F8
```

WAR/WAW Example

```
DIVD F0,F2,F4
ADDD F6,F0,F8
SUBD F8,F8,F14
MULD F6,F10,F8
```

read after write dependence

WAR/WAW Example

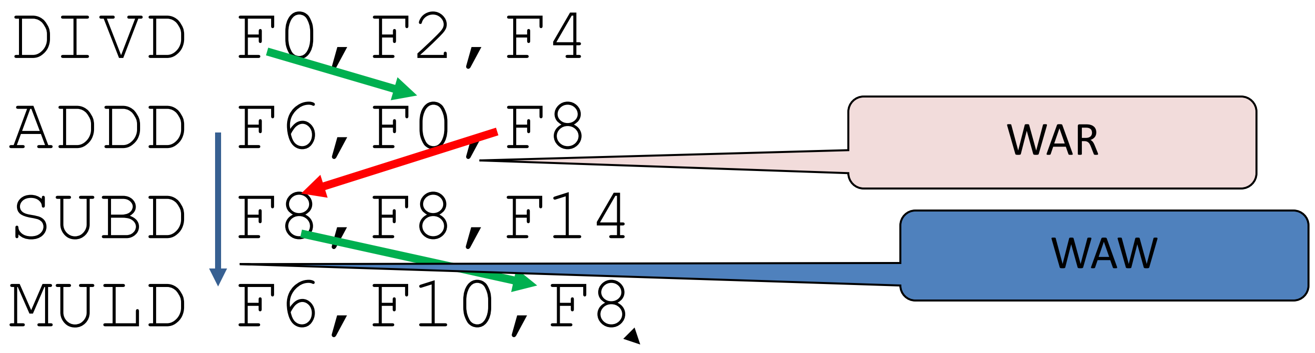


```
DIVD F0,F2,F4
ADDD F6,F0,F8
SUBD F8,F8,F14
MULD F6,F10,F8
```

The scoreboard would stall:

- SUBD in the WB stage, waiting that ADDD reads F0 and F8 and

WAR/WAW Example

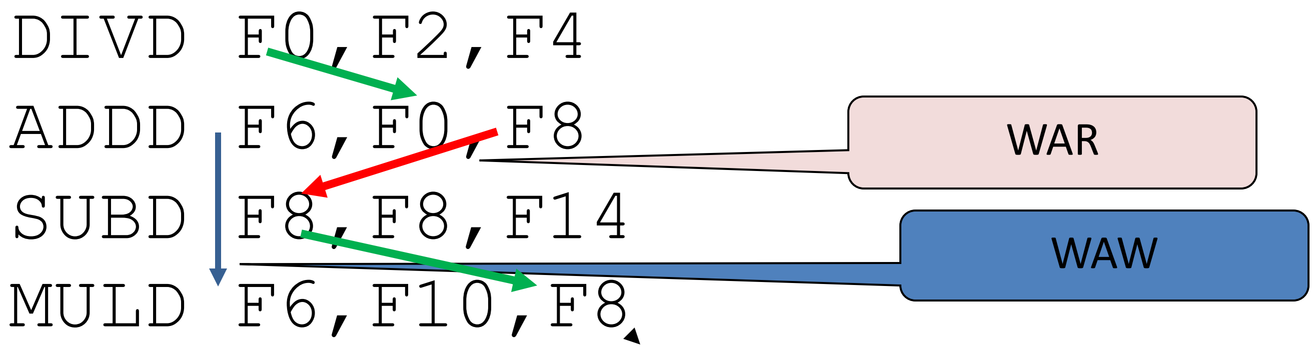


```
DIVD F0,F2,F4
ADDD F6,F0,F8
SUBD F8,F8,F14
MULD F6,F10,F8
```

The scoreboard would stall:

– SUBD in the WB stage, waiting that ADDD reads F0 and F8 and
– MULD in the issue stage until ADDD writes F6.

WAR/WAW Example



```
DIVD F0,F2,F4
ADDD F6,F0,F8
SUBD F8,F8,F14
MULD F6,F10,F8
```

The scoreboard would stall:

- SUBD in the WB stage, waiting that ADDD reads F0 and F8 and
- MULD in the issue stage until ADDD writes F6.

Can be solved through register renaming

Scoreboard Implications

- Solution for WAW:
  - Detect hazard and stall issue of new instruction until the other instruction completes
- No register renaming
- Need to have multiple instructions in execution phase ➔ Multiple execution units or pipelined execution units
- Scoreboard keeps track of dependences and state of operations

Scoreboard structure: three parts

1. Instruction status

2. Functional Unit status

   Indicates the state of the functional unit (FU):

   Busy – Indicates whether the unit is busy or not --> to determine the phase of execution of instruction
   Op - The operation to perform in the unit (+,-, etc.)
   Fi - Destination register
   Fj, Fk – Source register numbers
   Qj, Qk – Functional units producing source registers
   Rj, Rk – Flags indicating when Fj, Fk are ready --> when both true, the instruction can be executed

3. Register result status

   Indicates which functional unit will write each register.
   Blank if no pending instructions will write that register.

Detailed Scoreboard Pipeline Control

Instruction status	Wait until	Bookkeeping
Issue	Not busy (FU) and not result(D)	Busy(FU)← yes; Op(FU)← op; Fi(FU)← \`D' ; Fj(FU)← \`S1' ; Fk(FU)← \`S2' ; Qj← Result( 'S1' ); Qk← Result(\`S2'); Rj← not Qj; Rk← not Qk; Result('D')← FU;
Read operands	Rj and Rk	Rj← No; Rk← No
Execution complete	Functional unit done	
Write result	∀f((Fj(f)≠Fi(FU) or Rj(f)=No) & (Fk(f) ≠Fi(FU) or Rk(f)=No))	∀f(if Qj(f)=FU then Rj(f)← Yes); ∀f(if Qk(f)=FU then Rk(f)← Yes); Result(Fi(FU))← 0; Busy(FU)← No

Scoreboard Example

Instruction status:

Instruction		j	k	Issue	Read Oper	Exec Comp	Write Result
LD	F6	34+	R2				
LD	F2	45+	R3

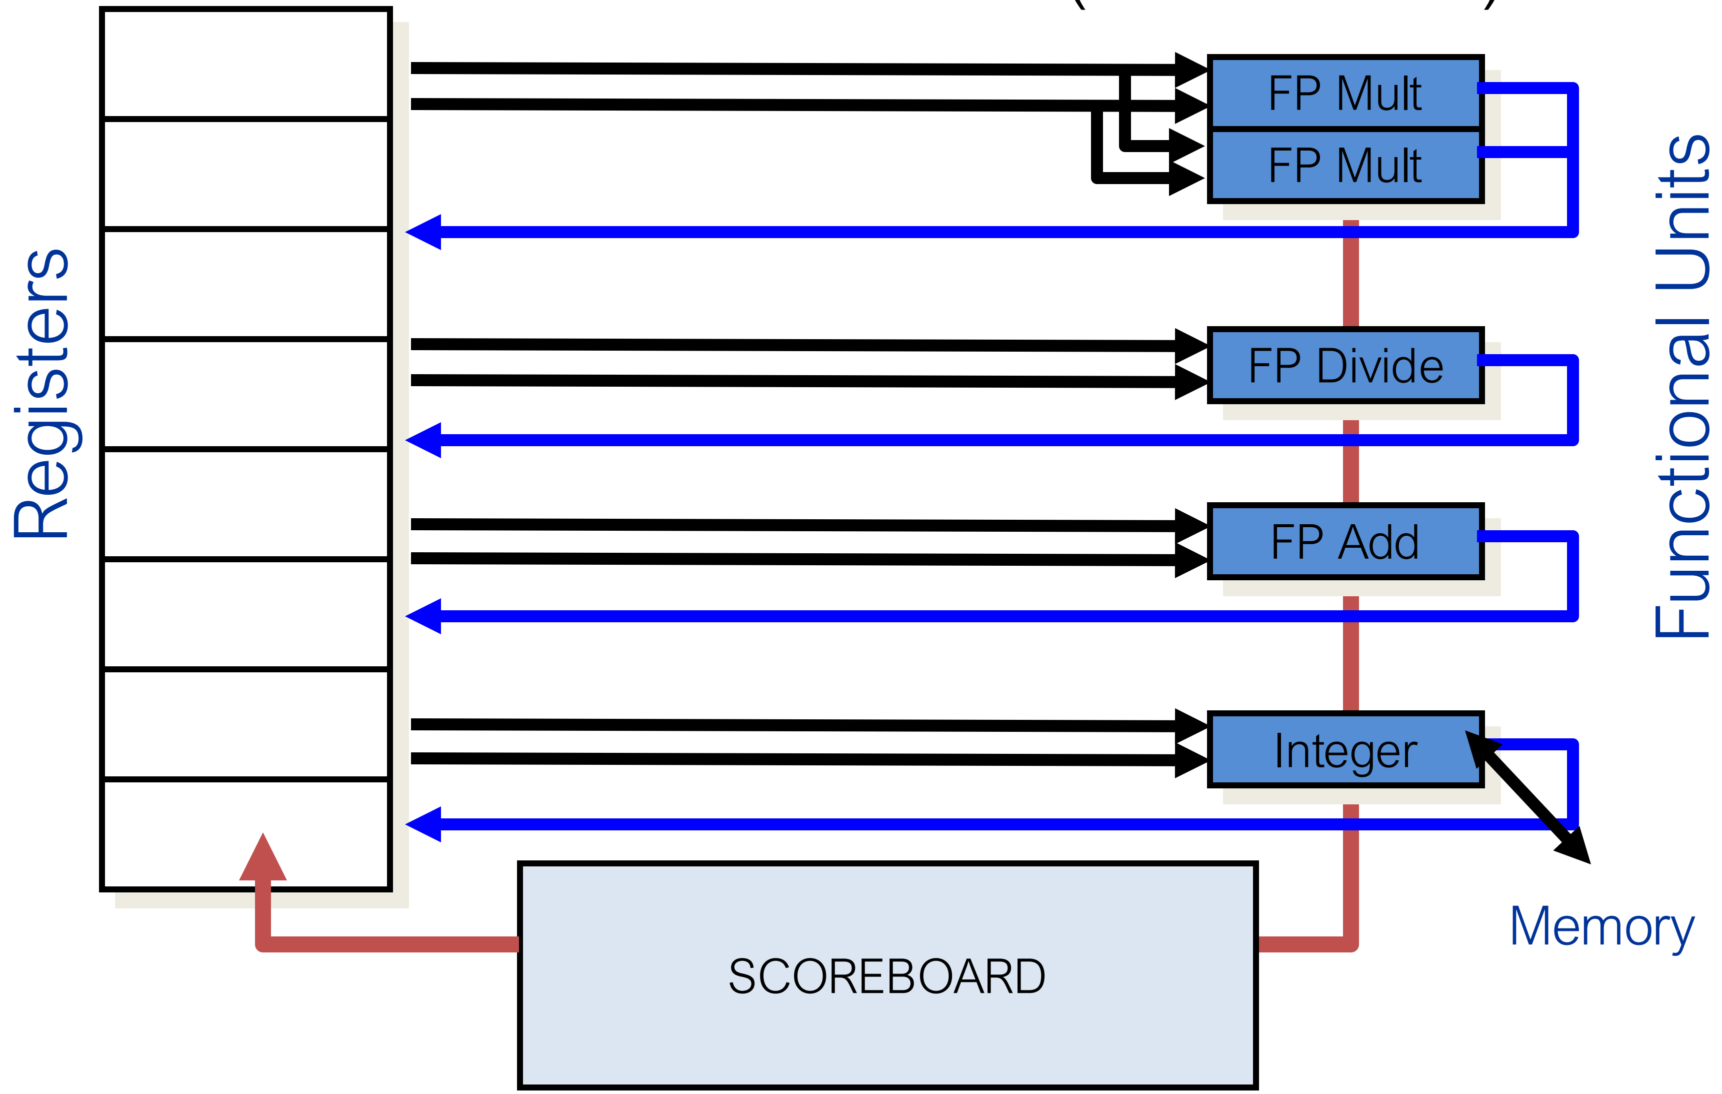
	Divide	No								

Register result status:

Clock		F0	F2	F4	F6	F8	F10	F12	...	F30
	FU									

Scoreboard Architecture (CDC 6600)



Execution Process

- Issue
  - Functional unit is free (structural)
  - Active instructions do not have same Rd (WAW)
- Read Operands
  - Checks availability of source operands
  - Resolves RAW hazards dynamically (out-of-order execution)
- Execution
  - Functional unit begins execution when operands arrive
  - Notifies the scoreboard when it has completed execution
- Write result
  - Scoreboard checks WAR hazards
  - Stalls the completing instruction if necessary

Scoreboard Example: Bootstrap

Instruction status:

	Mult2	No								
	Add	No								
	Divide	No								

Register result status:

Clock		*F0*	*F2*	*F4*	*F6*	*F8*	*F10*	*F12*	...	*F30*
3	*FU*				Integer					

Scoreboard Example: Cycle 3

Instruction status:

Instruction	j	k		*Issue*	*Read Oper*	*Exec Comp*	*Write Result*
LD	F6	34+	R2	1	2	3	
LD	F2	45+	R3				
MULTD	F0	F2	F4				
SUBD	F8	F6	F2				
DIVD	F10	F0	F6				
ADDD	F6	F8	F2				

When I get in the execution
I need everybody to know that I have read the operand and not longer need those inputs.
I'm freeing someone else who is willing to write that register

Functional unit status:

Time	*Name*	*Busy*	*Op*	*dest Fi*	*S1 Fj*	*S2 Fk*	*FU Qj*	*FU Qk*	*Fj? Rj*	*Fk? Rk*
	Integer	Yes	Load	F6		R2				No
	Mult1	No								
	Mult2	No								
	Add	No								
	Divide	No								

Register result status:

Clock		*F0*	*F2*	*F4*	*F6*	*F8*	*F10*	*F12*	...	*F30*
3	*FU*				Integer					

Issue MULT? **Issue stalls**

Load execution completes in one clock cycle

Scoreboard Example: Cycle 4

Instruction status:

Instruction		*j*	*k*	*Issue*	*Read Oper*	*Exec Comp*	*Write Result*
LD	F6	34+	R2	1	2	3	4
LD	F2	45+	R3				
MULTD	F0	F2	F4				
SUBD	F8	F6	F2				
DIVD	F10	F0	F6				
ADDD	F6	F8	F2				

Functional unit status:

Time	*Name*	*Busy*	*Op*	*dest Fi*	*S1 Fj*	*S2 Fk*	*FU Qj*	*FU Qk*	*Fj? Rj*	*Fk? Rk*
	Integer	No								
	Mult1	No								
	Mult2	No								
	Add	No								
	Divide	No								

Register result status:

Clock		*F0*	*F2*	*F4*	*F6*	*F8*	*F10*	*F12*	...	*F30*
4	*FU*				Integer					

Scoreboard Example: Cycle 4

Instruction status:

Instruction		j	k	Issue	Read Oper	Exec Comp	Write Result
LD	F6	34+	R2	1	2	3	4
LD	F2	45+	R3				
MULTD	F0	F2	F4				
SUBD	F8	F6	F2				
DIVD	F10	F0	F6				
ADDD	F6	F8	F2				

Now the Integer FU is free, why are we not allowing the next LD to be issued?
Remember the scoreboard is centralized, decisions must pass through it. In CC 4 scoreboard is allowing the first load to write back, that means in the next clock cycle it will allow the next LD to be issued

Functional unit status:

Time	Name	Busy	Op	dest Fi	S1 Fj	S2 Fk	FU Qj	FU Qk	Fj? Rj	Fk? Rk
	Integer	No								
	Mult1	No								
	Mult2	No								
	Add	No								
	Divide	No								

Register result status:

Clock		F0	F2	F4	F6	F8	F10	F12	...	F30
4	FU				Integer					

Issue stalls

Write F6

Scoreboard Example: Cycle 5

Instruction status:

Instruction		*j*	*k*	*Issue*	*Read Oper*	*Exec Comp*	*Write Result*
LD	F6	34+	R2	1	2	3	4
LD	F2	45+	R3	5			
MULTD	F0	F2	F4				
SUBD	F8	F6	F2				
DIVD	F10	F0	F6

	Mult1	No								
	Mult2	No								
	Add	No								
	Divide	No								

Register result status:

Clock		F0	F2	F4	F6	F8	F10	F12	...	F30
5	*FU*		Integer							

The 2nd load is issued

Scoreboard Example: Cycle 6

Instruction status:

Instruction		j	k	Issue	Read Oper	Exec Comp	Write Result
LD	F6	34+	R2	1	2	3	4
LD	F2	45+	R3	5	6		
MULTD	F0	F2	F4	6			
SUBD	F8	F6	F2				
DIVD	F10	F0	F6				
ADDD	F6	F8	F2				

Functional unit status:

Time	Name	Busy	Op	dest Fi	S1 Fj	S2 Fk	FU Qj	FU Qk	Fj? Rj	Fk? Rk
	Integer	Yes	Load	F2		R3				Yes
	Mult1	Yes	Mult	F0	F2	F4	Integer		No	Yes
	Mult2	No								
	Add	No								
	Divide	No								

Register result status:

Clock		F0	F2	F4	F6	F8	F10	F12	...	F30
6	*FU*	Mult1	Integer							

How to set Rj and Rk?
We check the respective register in the register result status, if the cell is occupied by an operation that means that there is a FU which will need to write that register, and so the respective Rj (Rk) will be set to No, otherwise if the cell is empty we set it to Yes

Scoreboard Example: Cycle 6

Instruction status:

Instruction	j	k		*Issue*	*Read Oper*	*Exec Comp*	*Write Result*
LD	F6	34+	R2	1	2	3	4
LD	F2	45+	R3	5	6		
MULTD	F0	F2	F4	6			
SUBD	F8	F6	F2				
DIVD	F10	F0	F6				
ADDD	F6	F8	F2				

Functional unit status:

Time	*Name*	*Busy*	*Op*	*dest Fi*	*S1 Fj*	*S2 Fk*	*FU Qj*	*FU Qk*	*Fj? Rj*	*Fk? Rk*
	Integer	Yes	Load	F2		R3				Yes
	Mult1	Yes	Mult	F0	F2	F4	Integer		No	Yes
	Mult2	No								
	Add	No								
	Divide	No								

Register result status:

Clock		*F0*	*F2*	*F4*	*F6*	*F8*	*F10*	*F12*	...	*F30*
6	*FU*	Mult1	Integer							

MULT is issued but has to wait for F2 from LOAD (RAW)

Scoreboard Example: Cycle 7

Instruction status:

Instruction		j	k	Issue	Read Oper	Exec Comp	Write Result
LD	F6	34+	R2	1	2	3	4
LD	F2	45+	R3	5	6	7	
MULTD	F0	F2	F4	6			
SUBD	F8	F6	F2	7			
DIVD	F10	F0	F6				
ADDD	F6	F8	F2				

Functional unit status:

Time	Name	Busy	Op	dest Fi	S1 Fj	S2 Fk	FU Qj	FU Qk	Fj? Rj	Fk? Rk
	Integer	Yes	Load	F2		R3				No
	Mult1	Yes	Mult	F0	F2	F4	Integer		No	Yes
	Mult2	No								
	Add	Yes	Sub	F8	F6	F2		Integer	Yes	No
	Divide	No								

Register result status:

Clock		F0	F2	F4	F6	F8	F10	F12	...	F30
7	*FU*	Mult1	Integer			Add				

Cannot proceed with Read Operands with any instruction because we don't have two "Yes" in the R columns (we are preventing RAW)

Scoreboard Example: Cycle 7

Instruction status:

Instruction		j	k	Issue	Read Oper	Exec Comp	Write Result
LD	F6	34+	R2	1	2	3	4
LD	F2	45+	R3	5	6	7	
MULTD	F0	F2	F4	6			
SUBD	F8	F6	F2	7			
DIVD	F10	F0	F6				
ADDD	F6	F8	F2				

Functional unit status:

Time	Name	Busy	Op	dest Fi	S1 Fj	S2 Fk	FU Qj	FU Qk	Fj? Rj	Fk? Rk
	Integer	Yes	Load	F2		R3				No
	Mult1	Yes	Mult	F0	F2	F4	Integer		No	Yes
	Mult2	No								
	Add	Yes	Sub	F8	F6	F2		Integer	Yes	No
	Divide	No								

Register result status:

Clock		F0	F2	F4	F6	F8	F10	F12	...	F30
7	*FU*	Mult1	Integer			Add				

Now SUBD can be issued but has to wait for operands

Read multiply operands?

Scoreboard Example: Cycle 8a (First half of clock cycle)

On falling edge I inform scoreboard of things
(in this case that I have completed the operation)

Instruction status:

Instruction		j	k	*Issue*	*Read Oper*	*Exec Comp*	*Write Result*
LD	F6	34+	R2	1	2	3	4
LD	F2	45+	R3	5	6	7	
MULTD	F0	F2	F4	6			
SUBD	F8	F6	F2	7			
DIVD	F10	F0	F6	8			
ADDD	F6	F8	F2				

Functional unit status:

Time	*Name*	*Busy*	*Op*	*dest Fi*	*S1 Fj*	*S2 Fk*	*FU Qj*	*FU Qk*	*Fj? Rj*	*Fk? Rk*
	Integer	Yes	Load	F2		R3				No
	Mult1	Yes	Mult	F0	F2	F4	Integer		No	Yes
	Mult2	No								
	Add	Yes	Sub	F8	F6	F2		Integer	Yes	No
	Divide	Yes	Div	F10	F0	F6	Mult1		No	Yes

Register result status:

Clock		*F0*	*F2*	*F4*	*F6*	*F8*	*F10*	*F12*	...	*F30*
8	*FU*	Mult1	Integer			Add	Divide			

Scoreboard Example: Cycle 8a (First half of clock cycle)

Instruction status:

Instruction		j	k	*Issue*	*Read Oper*	*Exec Comp*	*Write Result*
LD	F6	34+	R2	1	2	3	4
LD	F2	45+	R3	5	6	7	
MULTD	F0	F2	F4	6			
SUBD	F8	F6	F2	7			
DIVD	F10	F0	F6	8			
ADDD	F6	F8	F2				

Functional unit status:

Time	*Name*	*Busy*	*Op*	*dest Fi*	*S1 Fj*	*S2 Fk*	*FU Qj*	*FU Qk*	*Fj? Rj*	*Fk? Rk*
	Integer	Yes	Load	F2		R3				No
	Mult1	Yes	Mult	F0	F2	F4	Integer		No	Yes
	Mult2	No								
	Add	Yes	Sub	F8	F6	F2		Integer	Yes	No
	Divide	Yes	Div	F10	F0	F6	Mult1		No	Yes

Register result status:

Clock		*F0*	*F2*	*F4*	*F6*	*F8*	*F10*	*F12*	...	*F30*
8	*FU*	Mult1	Integer			Add	Divide			

DIVD is issued but there is another RAW hazard (F0) from MULTD then DIVD has to wait for F0

Scoreboard Example: Cycle 8b (Second half of clock cycle)

On rising edge I will perform the writeback if scoreboard allowed me to do so

Instruction status:

Instruction		*j*	*k*	*Issue*	*Read Oper*	*Exec Comp*	*Write Result*
LD	F6	34+	R2	1	2	3	4
LD	F2	45+	R3	5	6	7	8
MULTD	F0	F2	F4	6			
SUBD	F8	F6	F2	7			
DIVD	F10	F0	F6	8			
ADDD	F6	F8	F2				

--> load is allowed to write back

Functional unit status:

Time	*Name*	*Busy*	*Op*	*dest Fi*	*S1 Fj*	*S2 Fk*	*FU Qj*	*FU Qk*	*Fj? Rj*	*Fk? Rk*
	Integer	No								
	Mult1	Yes	Mult	F0	F2	F4			Yes	Yes
	Mult2	No								
	Add	Yes	Sub	F8	F6	F2			Yes	Yes
	Divide	Yes	Div	F10	F0	F6	Mult1		No	Yes

Register result status:

Clock		*F0*	*F2*	*F4*	*F6*	*F8*	*F10*	*F12*	...	*F30*
8	*FU*	Mult1				Add	Divide			

Load completes, and operands for MULT an SUBD are ready

Scoreboard Example: Cycle 9

Instruction status:

Instruction		*j*	*k*	*Issue*	*Read Oper*	*Exec Comp*	*Write Result*
LD	F6	34+	R2	1	2	3	4
LD	F2	45+	R3	5	6	7	8
MULTD	F0	F2	F4	6	9		
SUBD	F8	F6	F2	7	9		
DIVD	F10	F0	F6	8			
ADDD	F6	F8	F2				

Integer: 1cc
Mult1: 10cc
Add: 2cc
Divide: 40cc

Functional unit status:

Time	*Name*	*Busy*	*Op*	*dest Fi*	*S1 Fj*	*S2 Fk*	*FU Qj*	*FU Qk*	*Fj? Rj*	*Fk? Rk*
	Integer	No

	Mult2	No								
2	Add	Yes	Sub	F8	F6	F2			Yes	Yes
	Divide	Yes	Div	F10	F0	F6	Mult1		No	Yes

Note
Remaining
(the remaining clock cycles until the execution completes)

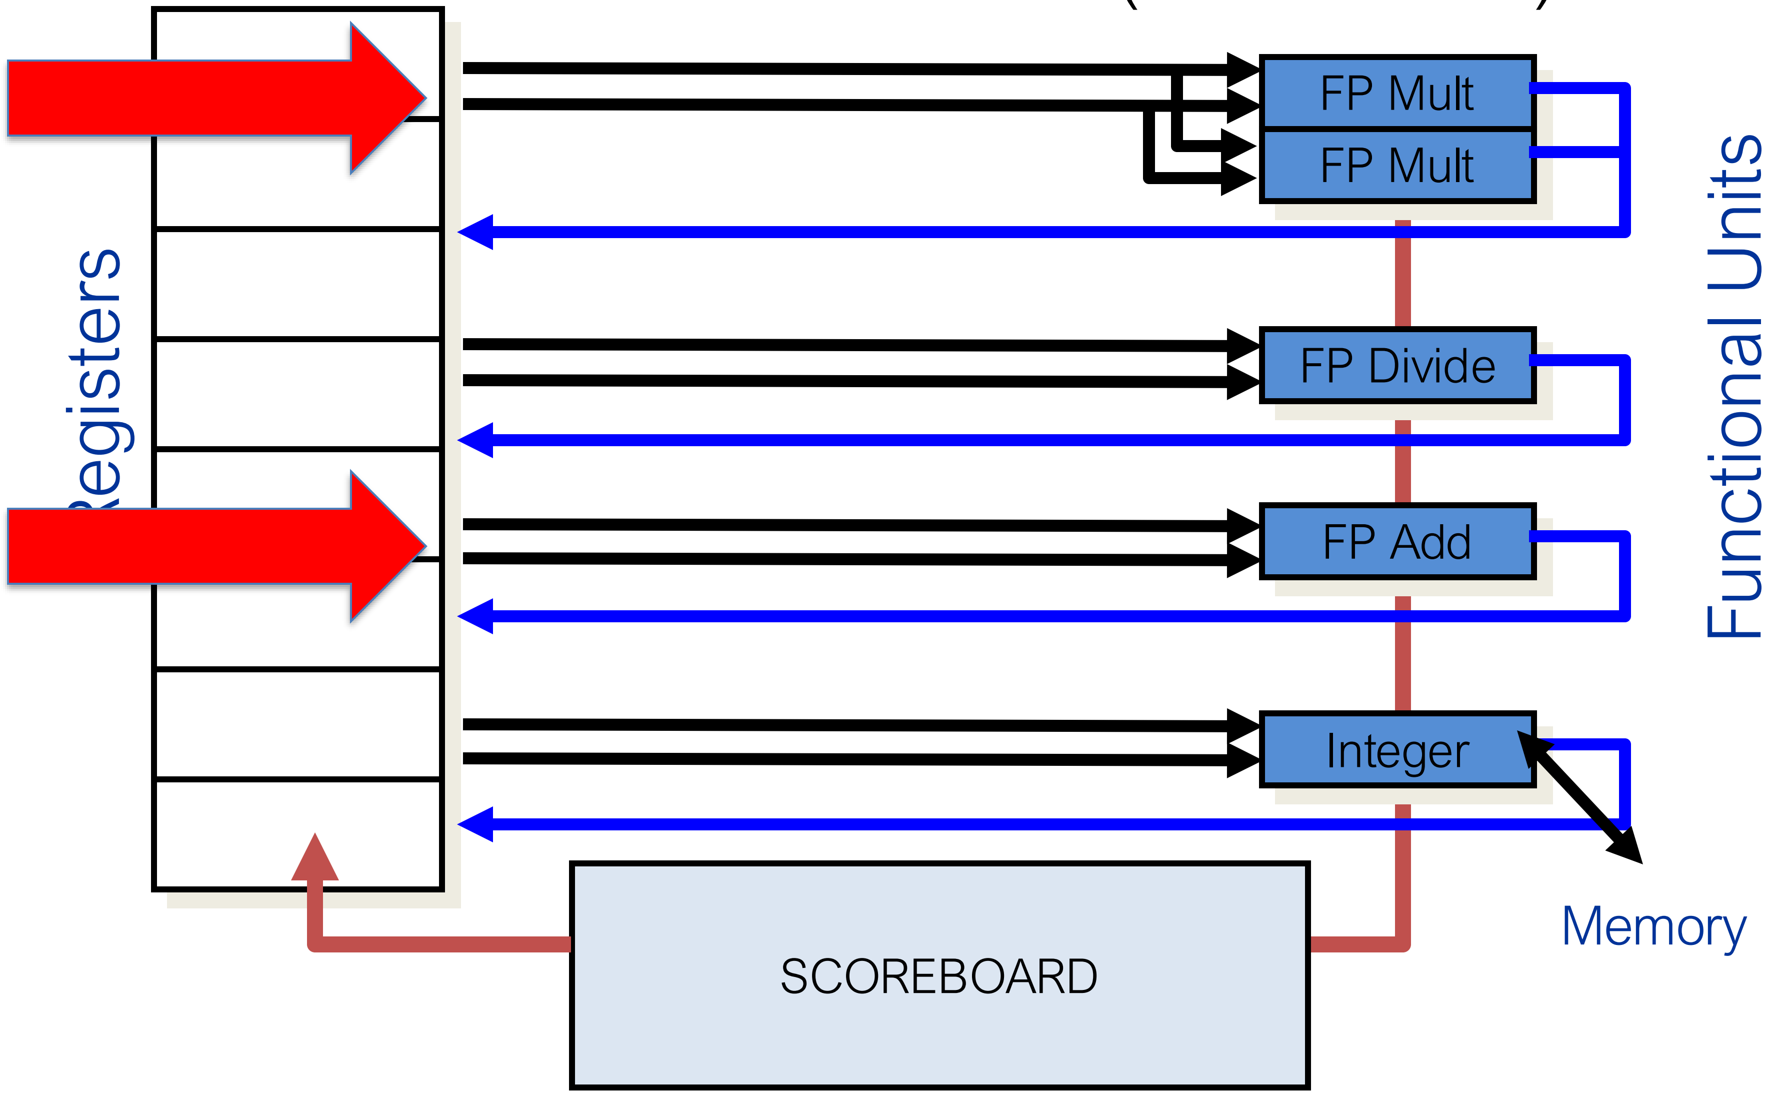
Register result status:

Clock		*F0*	*F2*	*F4*	*F6*	*F8*	*F10*	*F12*	...	*F30*
9	*FU*	Mult1				Add	Divide			

Execution starts at 9 (I have 10 clock cycle left for execution of the MUL, included the 9th)
clock cycle 10 (still 8)
...
clock cycle 17 (still 1 clock cycle
clock cycle 18 (still 0 clock cycle --> execution completed)

The read and the execution are parallel!

Scoreboard Architecture (CDC 6600)



Scoreboard Example: Cycle 9

Instruction status:

Instruction		j	k	*Issue*	*Read Oper*	*Exec Comp*	*Write Result*
LD	F6	34+	R2	1	2	3	4
LD	F2	45+	R3	5	6	7	8

Clock		*F0*	*F2*	*F4*	*F6*	*F8*	*F10*	*F12*	...	*F30*
20	*FU*				Add		Divide			

Scoreboard Example: Cycle 21

Instruction status:

Instruction		*j*	*k*	*Issue*	*Read Oper*	*Exec Comp*	*Write Result*
LD	F6	34+	R2	1	2	3	4
LD	F2	45+	R3	5	6	7	8
MULTD	F0	F2	F4	6	9	19	20
SUBD	F8	F6	F2	7	9	11	12
DIVD	F10	F0	F6	8	21		
ADDD	F6	F8	F2	13	14	16	

Integer: 1cc
Mult: 10cc
Add: 2cc
Divide: 40cc

Functional unit status:

Time	*Name*	*Busy*	*Op*	*des Fi*	*S1 Fj*	*S2 Fk*	*FU Qj*	*FU Qk*	*Fj? Rj*	*Fk? Rk*
	Integer	No								
	Mult1									
	Mult	No								
	dd	Yes	Add	F6	F8	F2			No	No
40	Divide	Yes	Div	F10	F0	F6			Yes	Yes

Register result status:

Clock		*F0*	*F2*	*F4*	*F6*	*F8*	*F10*	*F12*	...	*F30*
21	*FU*				Add		Divide			

WAR Hazard is now gone...

Scoreboard Example: Cycle 22

Instruction status:

Instruction		j	k	Issue	Read Oper	Exec Comp	Write Result
LD	F6	34+	R2	1	2	3	4
LD	F2	45+	R3	5	6	7	8
MULTD	F0	F2	F4	6	9	19	20
SUBD	F8	F6	F2	7	9	11	12
DIVD	F10	F0	F6	8	21		
ADDD	F6	F8	F2	13	14	16	22

Functional unit status:

Time	Name	Busy	Op	dest Fi	S1 Fj	S2 Fk	FU Qj	FU Qk	Fj? Rj	Fk? Rk
	Integer	No								
	Mult1	No								
	Mult2	No								
	Add	No								
39	Divide	Yes	Div	F10	F0	F6			No	No

Now this No means I have read the operands and other instructions are free to write on the registers

Register result status:

Clock		F0	F2	F4	F6	F8	F10	F12	...	F30
22	*FU*						Divide			

Now DIVD has read its operands, ADDD can write the result in F6

Again: in the first half of clock information from scoreboard is exchanged, in the second half the writeback is performed

Faster than light computation (skip a couple of cycles)

Scoreboard Example: Cycle 61

Instruction status:

Instruction		j	k	Issue	Read Oper	Exec Comp	Write Result
LD	F6	34+	R2	1	2	3	4
LD	F2	45+	R3	5	6	7	8
MULTD	F0	F2	F4	6	9	19	20
SUBD	F8	F6	F2	7	9	11	12
DIVD	F10	F0	F6	8	21	61	
ADDD	F6	F8	F2	13	14	16	22

Functional unit status:

Time	Name	Busy	Op	dest Fi	S1 Fj	S2 Fk	FU Qj	FU Qk	Fj? Rj	Fk? Rk
	Integer	No								
	Mult1	No								
	Mult2	No								
	Add	No								
0	Divide	Yes	Div	F10	F0	F6			No	No

Register result status:

IN-ORDER ISSUE

OUT-OF-ORDER EXECUTE

OUT-OF-ORDER COMMIT

Register result status:

Clock		*F0*	*F2*	*F4*	*F6*	*F8*	*F10*	*F12*	...	*F30*
62	*FU*									

Checks can be performed to check errors based on order of issue

CDC 6600 Scoreboard

- Key idea of Scoreboard: Allow instructions behind stall to proceed (Decode $\Rightarrow$ Issue Instruction & Read Operands)
- Speedup of 2.5 w.r.t. no dynamic scheduling
- Speedup 1.7 by reorganizing instructions from compiler
- BUT slow memory (no cache) limits benefit
- Limitations of 6600 scoreboard:
  - No forwarding hardware
  - Limited to instructions in basic block (small window)
  - Small number of functional units (structural hazards), especially integer/load store units
  - Do not issue on structural hazards
  - Wait for WAR hazards
  - Prevent WAW hazards

Summary

- Instruction Level Parallelism (ILP) in SW or HW
- Loop level parallelism is easiest to see
- SW parallelism dependencies defined for program, hazards if HW cannot resolve
- SW dependencies/compiler sophistication determine if compiler can unroll loops
  - Memory dependencies hardest to determine
- HW exploiting ILP
  - Works when can't know dependence at run time
  - Code for one machine runs well on another

Key idea of Scoreboard: Allow instructions behind stall to proceed (Decode $\Rightarrow$ Issue Instruction & Read Operands)

- Enables out-of-order execution => out-of-order completion
- ID stage checked both structural and WAW hazards
